

Using a Number Line

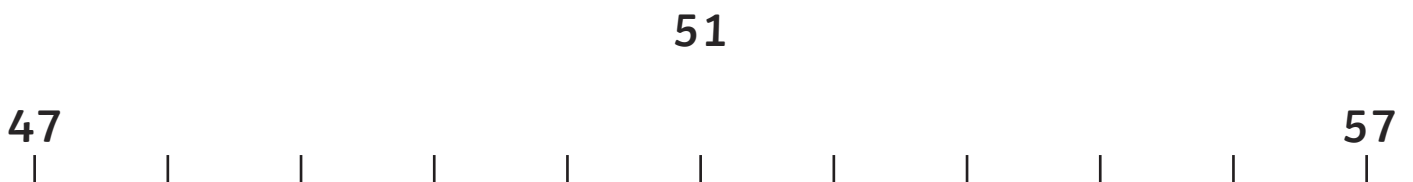

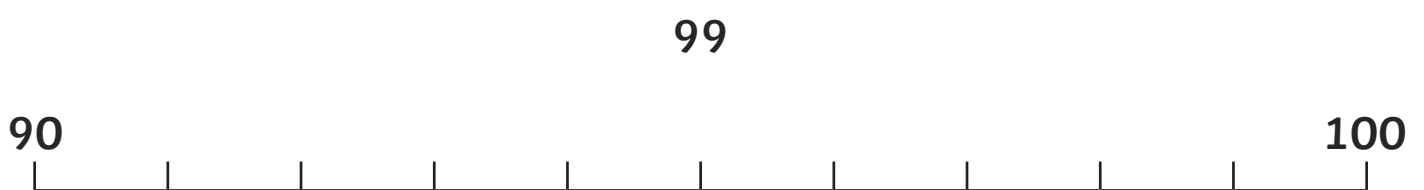

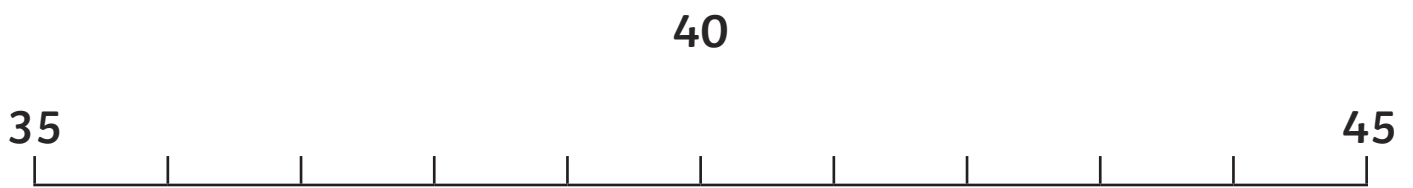

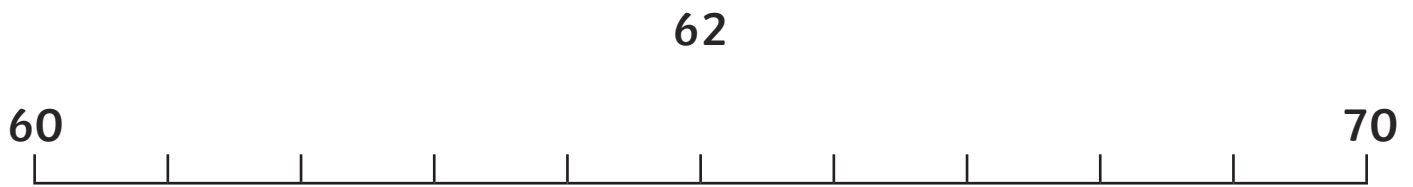

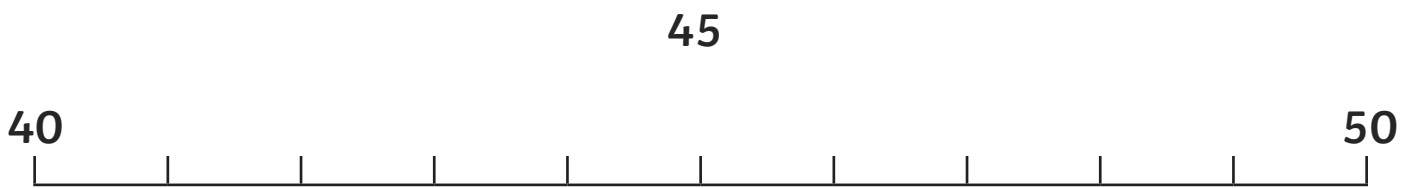

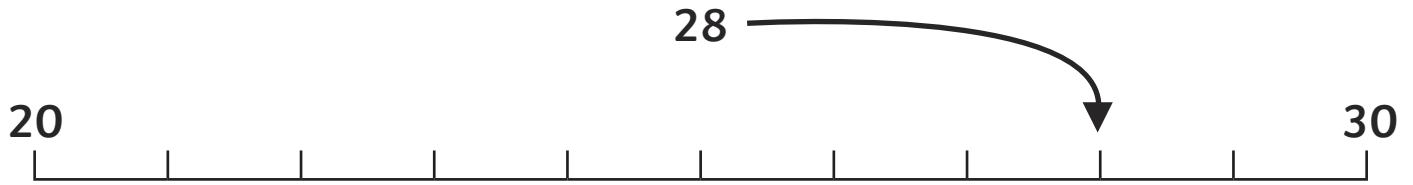

Draw arrows to show where the numbers belong on the number lines.
The first one has been done for you.

Parents: When children understand place value and the relative size of numbers in comparison with one another, they will be able to make a good estimate of where numbers would exist on a blank number line. To support your child, look at the numbers 0 to 10 written in a line, and think about where each digit comes in relation to the others.
